

ABSTRACT

5 **PEPTIDE ANALOGUES, ANTIBODIES DIRECTED AGAINST THE
LATTER, AND USES THEREOF, IN PARTICULAR IN
PHARMACEUTICAL AND DIAGNOSTIC COMPOSITIONS**

The invention relates to the use of peptide analogues of parent peptides, characterized in that they correspond to the said parent peptides in which :

- 10 - at least one peptide bond -CO-NH- of the peptide chain is modified, with the exception of modifications of the retro or retro-inverso type, or
- at least one amino acid of the peptide chain is substituted with a non-protein-generating amino acid, or
- 15 - at least peptide bond -CO-NH- of the peptide chain is modified and at least one amino acid of the said peptide chain is substituted with a non-protein-generating amino acid,
- for
- the preparation of a medicinal product intend for preventing or treating the abovementioned pathologies, or
- 20 - the preparation of a composition intended for the *in vivo* diagnosis of the abovementioned pathologies, or for the *in vivo* evaluation of the immune response in the context of the abovementioned pathologies, by carrying out a skin hypersensitivity reaction by means of intradermal injection of the said composition,
- carrying out a method for the *in vitro* diagnosis of the said pathologies.
